Crystalline®
railing system

www.aluminco.com

ALUMINCO, headquartered in Oinofyta Viotias, was the first company in this sector which, since its establishment, launched the production of items made of cast aluminium in traditional designs.

After 31 years of experience in the aluminium sector, the company has evolved into a vertically integrated aluminium industry.

Its production facilities include integrated processing, powder coating, assembly, finishing, packaging and storage units for the products it produces and delivers.

ALUMINCO offers a wide range of aluminium products and systems, architectural and construction solutions, which include:

- A full range of tilt & turn as well as sliding, cold and thermal break aluminium systems, as well as curtain wall
- A variety of designs on aluminium panels for any architectural or construction requirement, with an emphasis on style, functionality and safety
- Safety doors and reinforced doors for main entrances suitable for private or commercial buildings. Available in traditional or modern designs, in a large variety of patterns and colors
- Railing systems for balconies, patios and stairs. In traditional and modern designs, made of cast aluminium, aluminium or inox type profiles and glass railing systems
- Outdoor systems, such as Pergolas, shading systems, canopies, gates, fences and lighting posts, offering integrated solutions for the construction of high demand buildings

ALUMINCO exports its products to over 60 countries globally and is always at the forefront of innovative development of products and systems satisfying the most demanding clients.

The powder coating process is certified by QUALICOAT and SEASIDE CLASS (seaside class processing) specifications. Furthermore, ALUMINCO also conforms to the ISO 9001 certified by TUV Austria, for quality management system and the ISO 14001 environmental management system.

All aluminium and railing systems are designed, developed and tested by our Research & Development department and are then certified by established institutes and international organizations, such as the IFT Rosenheim in Germany, the Instituto Giordano in Italy, the EKANAL (Greek Center of Aluminium Development) in Greece.

ALUMINCO, siégeant à Inofyta Viotias (40 km d' Athènes et 70km de l'aéroport international Eleftherios Venizelos) fut la première société en Grèce qui a lancé la fabrication de produits en aluminium en fond d' alu au design classique.

Avec son expérience de plus de 31 ans, la société a évoluée dans une industrie d' aluminium verticale grâce aux investissement et développement des sa capacité de production.

ALUMINCO offre une vaste gamme de produits et systèmes en aluminium, en satisfaisant de demande les plus exigeantes, tels que:

- Une gamme complète de systèmes de menuiserie, ouvrant à la française, coulissant, coulissant à lever, mur rideau, en rupture thermique ainsi qu'en série froide.
- Une gamme variée de panneaux en aluminium, compatible avec tous les systèmes de menuiserie, au style contemporain ou classique
- Des portes d'entrée, portes de sécurité, adaptable aux bâtiments privés ou même de commerciaux, grâce au grand choix de modèles
- Une gamme de systèmes de garde corps, le plus complet du marché.
- Nos systèmes d'ombrage, Pergolas, marquises, clôtures et portails et éclairage ne laissent pas aucune espace qui n'est pas «habillée» par ALUMINCO

Les produits ALUMINCO sont diffusés dans plus de 60 pays à travers le monde ! guidés par nos clients et par la demande du marché, nous nous efforçons de satisfaire les demandes les plus exigeantes, aussi bien en qualité que en fonctionnalité.

Notre plant de laque electrostatique, et procédure de laque sont bien certifiées par QUALICOAT et selon spécifications de SEASIDE CLASS.

Le respect d' ALUMINCO pour l'environnement est bien prouvé par ISO 14001, et ISO 9001 (norme internationale) émis par l'organisme TUV d' Autriche (gestion / management de la qualité)..

Pour suivre les tendances architecturales fortes, ALUMINCO et son équipe, commence par la conception, le design et finissent par la mise en œuvre de l'ensemble de produits et systèmes.

General information Informations générales

Aluminium

No other material can match the characteristics of aluminum. Light weight but strong at the same time, resisting to the most severe weather conditions, due to the application of oxide layer that protects the metal from corrosion. This layer is further strengthened by anodisation, providing even greater weather resistance. Furthermore, it is the most environmental friendly metal, as it is fully recyclable and non-toxic.

Aluminium has a unique combination of attractive properties:

- Low weight
- High strength
- Superior malleability
- Easy machining
- Excellent corrosion resistance
- Easy to mill, drill, cut, punch, bend, weld, bond, tape.

Unless stated otherwise in our catalogue, all of Crystalline types are brushed and anodized, make them ideal for both indoor and outdoor use.

Cleaning: Aluminium products can be cleaned with warm water and soap.

Did you know?

Some 75 percent of all aluminium ever produced is still in use! Aluminium can be reused for the same purposes over and over again. Unlike many other materials, aluminium does not lose its unique properties. Furthermore, the energy needed to produce secondary aluminium is only 5 percent of the original energy input.

Use of glass panels in Crystal Line instalations

A wide range of glass panels can be integrated with CRYSTAL LINE system, in various thicknesses and characteristics according to specifications. There are two main categories according to EN12543 and EN12600 specified by the European Union concerning the thermal treatment of the glass.

More specifically, EN12543 specifies the use of tempered and laminated glass with the insert of PVB membranes. This type of glass panels have the following qualities:

a) In case of breakage, they do not break in large and sharp pieces.
 b) Even in case of such breakage, the broken glass pieces remain attached on the PVB surface without putting in danger the safety of nearby persons. The fabrication of these tempered and laminated glass panels is being carried out by thermal treatment of ordinary glass which is afterwards sandwiched together with the PVB membranes to give the various grades and thickness of laminated glass panels.

In the following pictures show the different types of breakage:

- a) Tempered and laminated glass, and,
- b) Ordinary tempered glass.

Aluminium

Il est difficile de trouver un autre matériel avec tels caractéristiques que aluminium. Leger mais robuste en même temps, résistant au conditions climatiques les plus sévères, grâce à l' application d' une couche fine d' oxyde qui l' en protège de corrosion.

Cette couche devient encore plus forte par le procédure d' anodisation pour une protection contre la corrosion le plus efficace.

A ne pas oublier que l' aluminium est totalement recyclable et respectueux de l' environnement.

Ses caractéristiques uniques

- Leger & robuste
- Non toxique
- Propriété mécanique excellent
- Usinage facile
- Résistant au corrosion
- Rapport prix – qualité excellent

Sauf autrement indiqué, la finition standard de toutes profiles du système CRYSTALINE sont disponible en aluminium anodisé et brosse en teint d' inox.

Saviez vous que 75 pourcent de produits fabriqués en aluminium, sont toujours utilisables. Aluminium peut être recyclé pour plusieurs fois.

Ses caractéristiques mécaniques ne sont pas déformées comme dans des autres cas. L' énergie utilisée pour recycler l' aluminium est à 5% par rapport à son production primaire.

Generalites sur les garde corps Crystal Line

Toughened Glass
Thermally Toughened glass

Laminated Glass
TRIPLEX glass with
PVB membrane

Le système CRYSTAL LINE offre des solutions polyvalentes ou des différentes dimensions de vitrage, selon le type et Avis Technique sont adaptées. Pour des raisons liées à la sécurité des personnes, ces éléments verriers doivent conformer aux Normes Européennes (EN12543 & EN12600) qui spécifie le traitement thermique par un processus de trempe (refroidissement rapide).

Plus précisément, la gamme de systèmes CRYSTALINE s' installe avec de verre trempe et feuilleté ou lamine de son nom technique, constitue d' au moins deux feuilletés de verre séparées par de films intercalaires (PVB).

C'est grâce aux ces propriétés mécaniques et résistance au choc, que même au cas de blessure, le verre ne présente pas aucune risque lorsque les pièces cassées sont retenues par le film PVB.

La fabrication de verres trempe et feuilleté est fait par un traitement thermique qui rendent le verre ces qualités de sécurité.

Les photos ci-dessous montrent les différents types de brisures :

- a) Verre trempe
- b) Verre trempe et feuilleté

PVB films

The common characteristics amongst the two categories mentioned previously, are the use of the PVB interlayer films.

The film is of a tough yet pliable material known as polyvinyl butyral (PVB), placed in layers between the glass.

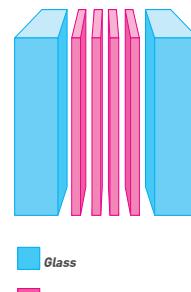

Rollers press the layers together to expel any air pockets. The glass is then heated to 70°C in a pressurized oil bath to permanently bond all layers together. Typically the thickness of each PVB film is 0.38mm, additional layers of glass and PVB film increase the strength of the material. Applying two interlayers of film, the thickness becomes 0.78mm, with three at 1.14mm and so on.

Apart from the different thickness of glass and PVB, a wide range of colored PVB, for example grey, blue green or yellow is available, offering a particular esthetic to modern buildings.

According to European Norms (EN 12600) the minimum number of films required is two, however ALUMINCO recommends the use of glass with four PVB films for maximal security.

Even in the event that the glass breaks, the two layers are held together by the PVB, allowing the sheet as a whole to bend and absorb the impact. This characteristic is especially important for places where safety or security are paramount.

PVB films

Glass
PVB film

Le membrane PVB est un intercalaire qui retient les fragments de verre en cas de casse due à des heurts accidentels, le vitrage reste en place, si encadre et il n'y a pas de chute de morceaux dangereux.

L'épaisseur d'un membrane PVB est de 0.38mm, en pratique on utilise plusieurs membranes de cette épaisseur afin d'accroître la durabilité et l'élasticité du vitrage feuillète. En ajoutant deux membranes l'épaisseur devient 0.76mm en ajoutant un troisième cela devient 1.14mm etc... le PVB est disponible dans une gamme de couleurs allant du transparent, le gris le jaune et beaucoup d'autres combinaisons qui permettent de réaliser une balustrade en harmonie avec l'esthétique de résidence.

Pour être en règle avec les European Standards (EN 12600), il faut au moins utiliser 2 membranes PVB entre deux parties de vitrage. Pour utiliser nos système CRYSTALINE, ALUMINCO recommande de toujours regarder situation par situation et de ne jamais hésiter à mettre un PVB en trop pour accroître la sécurité.

Types of securit glasses

The most common type Triplex glass consists of the combination of Heat Strengthened Glass – PVB – Heat Strengthened Glass. The result of a Heat Strengthened glass panel will resist two times stronger than ordinary glass, where a unified static force has been applied (EN 12543), to one of the same thickness.

The second type of Triplex glass, and the one which meets the safety criteria is Thermally Toughened Glass, and its combination with PVB, known as toughened glass. Toughened Glass is manufactured by subjecting the finished glass size to a heating and cooling treatment which set up high compressive stresses at the surface, and balancing tensile stresses in the centre of the glass, thus increasing its strength. The result is a glass that is 5 times stronger than ordinary glass.

Heat strengthened glass is produced by a similar process to toughened glass, however, the strength developed is about half that of toughened glass, and its breakage resembles that of annealed glass.

ALUMINCO strongly recommends the use of Heat Strengthened Glass with the installation of any type of Crystal Line system.

Typologie de verr trempe et feuilleté

Le verre, matériaux de construction, est un moyen d'ajouter de style et élégance, mais ce qui est le plus important c'est la sécurité de personnes.

Dernièrement, le verre a utilisé avec les garde corps vitrés, sont de verre trempe et feuillète.

Le verre feuillète est un assemblage de feuilles de verres et d'intercalaires de nature plastique. Les intercalaires peuvent se présenter sous forme de film, généralement (Poly-Vinyle-Butyral).

Ses caractéristiques, ils conservent les propriétés lumineuses et énergétiques, des produits de base. Une fois trempés, ils ne peuvent plus être découpés ni façonnés.

Le verre feuillète pour bâtiment fait l'objet de la norme EN ISO 12543.

Aluminco recommends

Offering products and which have been carefully verified and selected to complement our systems, is a long standing policy of ALUMINCO. The safety factor is a very important one to be considered when designing a new railing system as it is a vital aspect for any type of construction.

To make all this possible, we have invested considerable amount of time and resources in Research and Development (R&D), who carries out continuous tests in-house before proceeding with final certification.

All types of CRYSTALINE have been tested and certified for static load and impact load, and they conform with NF-P01-13: 1988 and NF-P 08-301; 1991 by Instituto Giordano as well as per TRAV by IFT ROSENHEIM.

Recommended glass to be used is 88.4, 1010.4 & 21.4, all with four interlayers of PVB for maximal security. Although most types of Crystal Line systems have been tested and certified without applying a handrail, its use is recommended as it improves significantly the mechanical support in total, and protects exposed edge glazing in the presence of mechanical or environmental stresses.

Aluminco recommend

Sécurité et qualité sont nos priorités. Toutes les phases de fabrication s'effectuent par la conception, en passant par le design et développement de produits finis.

Inspire par nos clients et par la demande du marché, ALUMINCO recherche et préconise de matériaux qui compliment sa gamme de produits en prenant compte des exigences de Normes Européennes.

Notre équipe de R & D n'arrête jamais de développer de systèmes fonctionnels et performants tel que votre bâtiment en mérite.

Tout les types de CRYSTALINE sont testés et certifiés selon l'Avis Technique de Normes NF P01-13:1988 & NF P08-301 : 1991, par Instituto Giordano autant que selon TRAV par IFT Rosenheim.

Bien que la plupart de systèmes CRYSTALINE sont certifiés pour montage sans main courante, ALUMINCO conseille son usage pour de raisons de sécurité et protection des arrêtes polis de verre, contre de conditions climatiques sévères.

Type A

On-floor glass supporting system

Système de base apparente supportant le vitrage (pose à la française)

On-floor glass supporting system

The supporting brackets, in hard aluminium alloy, are installed on fully finished floor, ceramic tile, marble or on a balcony parapet.

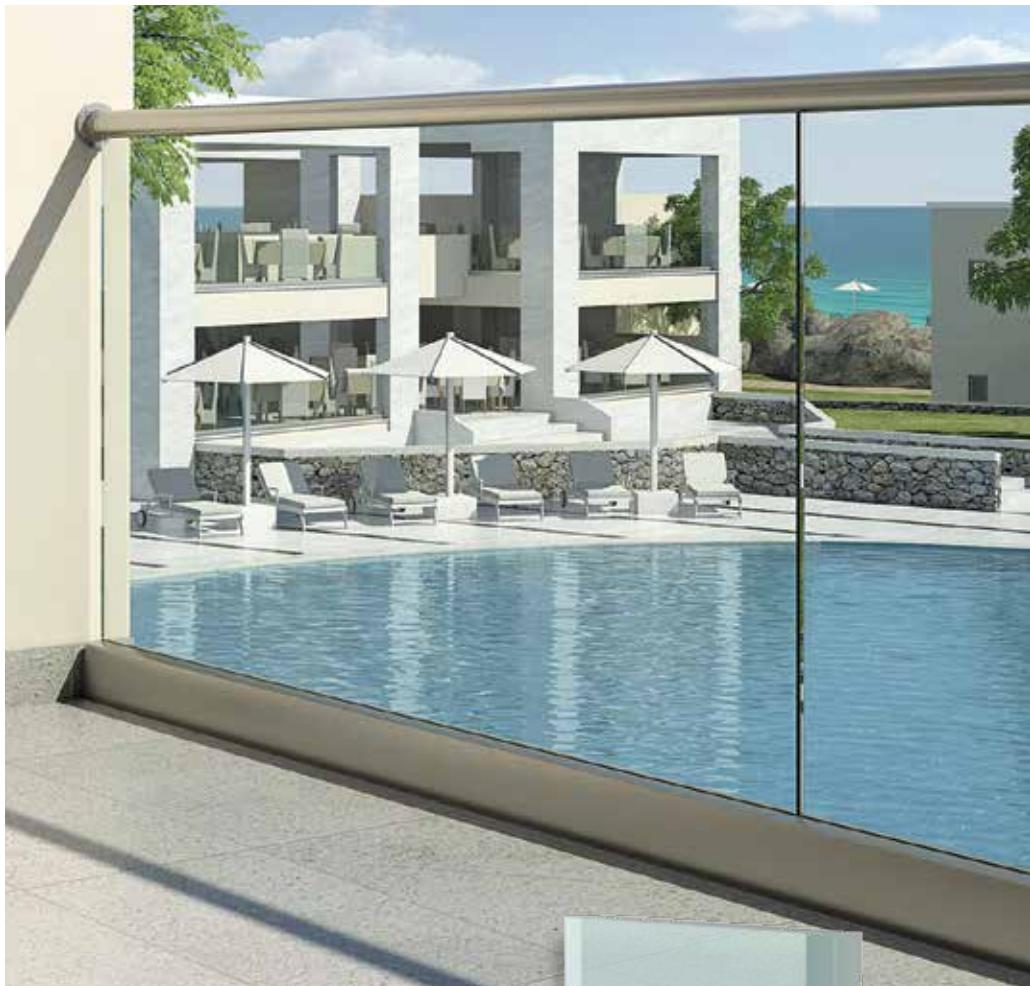

Glass panels of 88.4 thickness / 17.52mm and maximum height of 1200mm, are anchored with bolts which can easily be removed in case of need without any damage to the floor or system itself. The brackets are covered by the oval shape fascia profiles in anodized finish as well as many other shades of powder coating.

Système de base apparente supportant le vitrage

Il s'agit de système de garde-corps en verre solidarisés au gros œuvre «en pied», fixes en dalle.

Type A peut être utilisé dans des espaces publics ou privés tant à l'intérieur qu'à l'extérieur.

Le montage comporte les vitrage de 88.4 épaisseur de 17.52mm et hauteur à 1200mm, qui sont fixe par serrage et fini avec les profiles d'habillage.

Advantages

 It is an ideal solution for balconies, stairs and building enclosures for high architectural standards, offering an impressive and functional result with no view limit.

- Elegant line
- Maximum security
- Uninterrupted view
- Free of maintenance
- Patented system
- Compliance with UNI EN 10807 & NFP01-013
- Optional use of top handrail
- Wide choice of colors : RAL, Sable & anodized

Characteristics

 C'est un système idéal pour des terrasses, des rampes, des passerelles et des clôtures de bâtiments de haut standard. Il offre un résultat impressionnant et fonctionnel, ne limitant pas la vue.

- Élégant
- Réponds aux critères de sécurité
- Vue illimitée
- Pas d'entretien
- Système breveté
- Selon Avis Technique UNI EN 10807 & NF P01-013
- Option de main courante
- Choix de coloris – RAL, Sable, anodize & teint de bois

Type A10

On-floor support system with 10mm glass

Pose sur dalle avec de verre de 10mm

On- floor support system with 10mm glass

Light in weight but safe for residential and light-weight commercial use, this wedge system is designed to be installed on a finished floor, with a laminated glass of 55.2 and thickness of 10.76mm. Suitable for the interior as well as exterior balconies, terraces and swimming pools. Easy and quick to align, the glass panels are secured with gaskets and bolts, supplied by the manufacturer. Maximum height at 100cm is recommended and use of top handrail is essential.

Pose sur dalle avec de verre de 10mm

Pour gagner du temps et de l'argent, choisissez le type A10! Le profil de sol, prêt à l'emploi, c'est à dire incluant les gâches et visserie, donne une installation rapide et facile. La solution économique pour des lieux publics et privés. Le verre est fixe par serrage, aucune perçage sur le vitre n'est requis.

Advantages

 The perfect choice for private or light commercial use, with impressive simplicity and elegance.

- Attractive slim lines
- Affordable quality for 10mm glass
- No maintenance required
- Patented system
- Compliance by TRAV specifications
- Quick instalation
- Wide range of color options, RAL, Sable & anodized.

Characteristics

- Elégant et transparent
- Economique
- Système breveté
- Leger et facile a monter.
- Spécifications selon TRAV (allemands)
- Choix de coloris – RAL. Sable, anodisé & teint de bois.

Wedge on floor system

Pose sur dalle avec de profile de sol en une piece

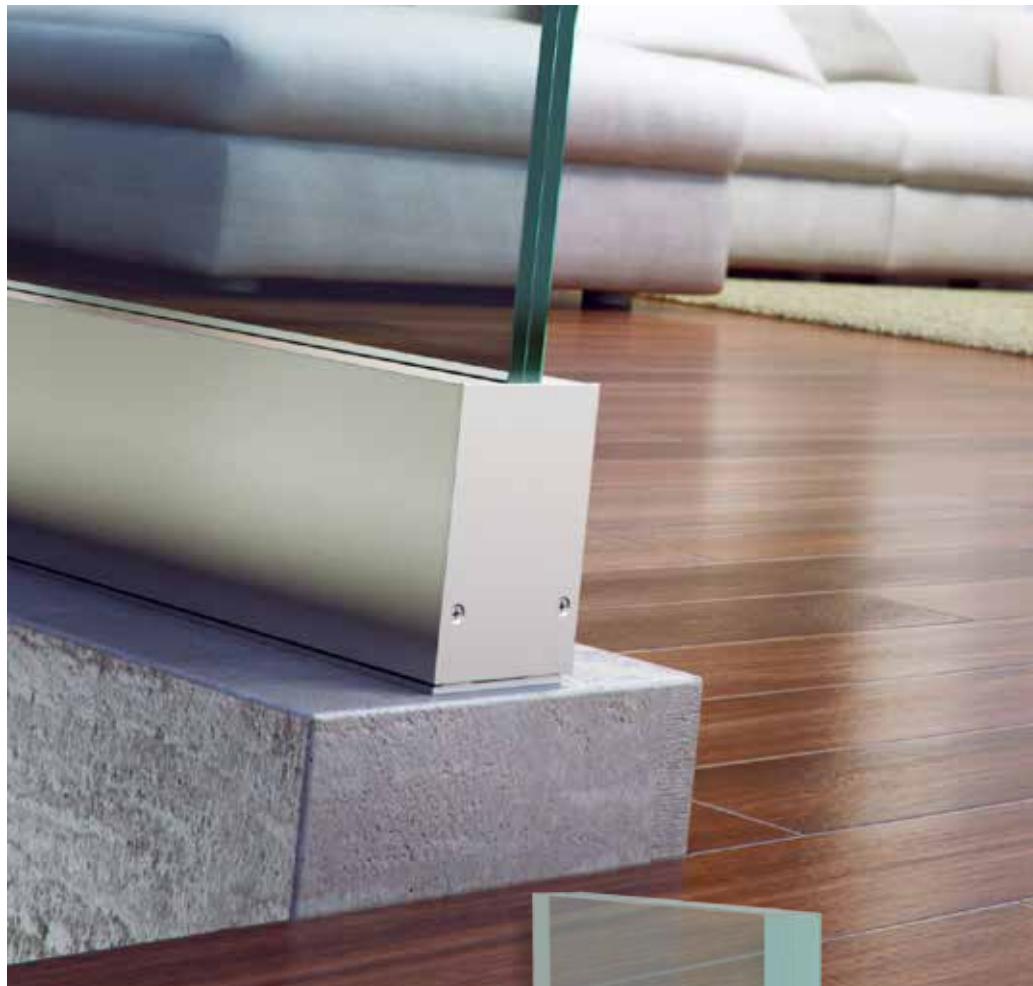

Wedge on floor system

Pose sur dalle avec de profile de sol en une piece

 This new wedge system is totally frameless, without any intervention of columns or additional support and ensures crystal clear view and unique feeling of freedom.

 Avec ce système, le design rencontre la sécurité, grâce au profile de base d'une seule pièce et du verre sans aucun intermédiaire. Fixation sur dalle avec calages et joints PVC.

Advantages

- One-piece floor profile for quick installation
- Optional in-floor installation
- Colour choice – RAL, Sable & anodized
- Minimal design
- Limitless transparency and view
- Optional use of handrail

Caracteristics

- Support d'un seul bloc
- Option d'installation encastrée

Type B

Adjustable system for on-floor instalation

Système réglable, pose sur dalle

Adjustable on floor glass supporting system

 The additional use of a floor guide, on which the supporting bases can be quickly applied and perfectly aligned, makes the concept of this system evolutionary.

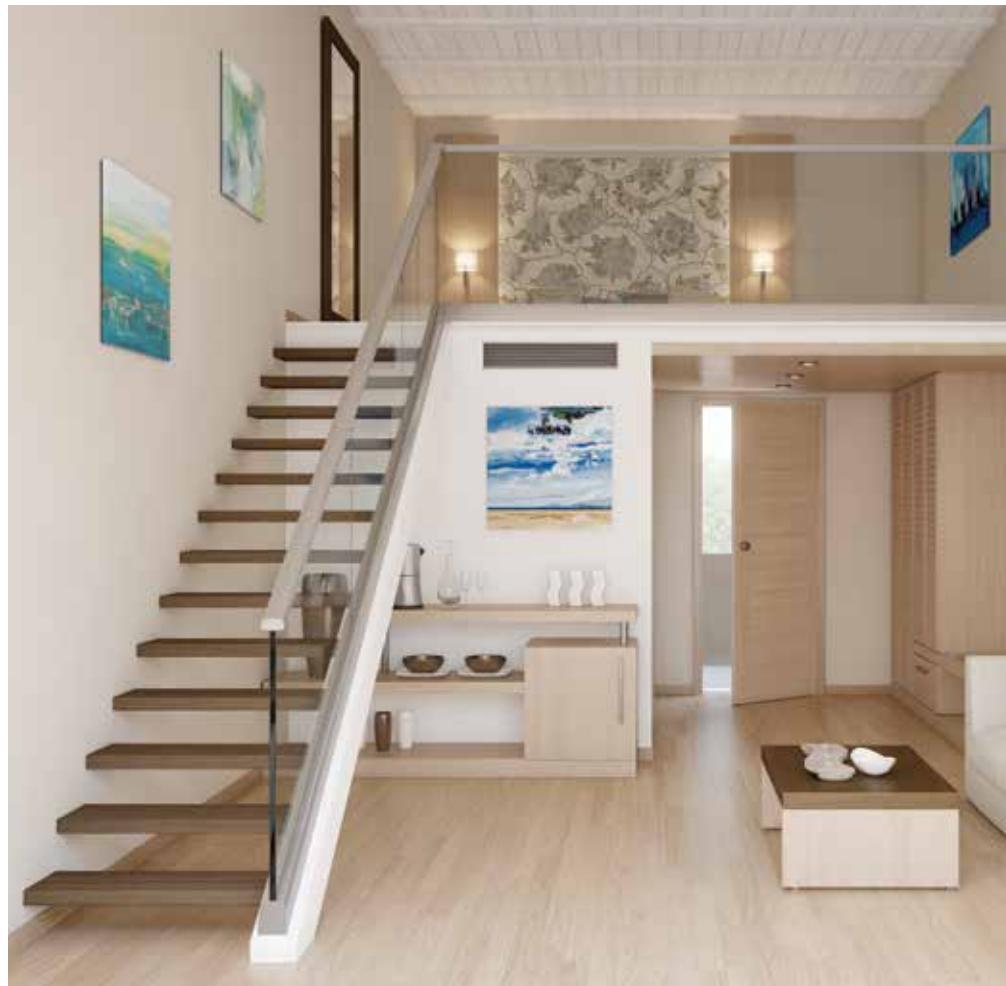

Glass panels to be used are 88.4 and thickness of 17.52mm & 21.52mm, the maximum height is specified at maximum 1200mm.

Système réglable, pose sur dalle

 Des possibilités de réglage absolument uniques rendent son montage encore plus simple mais robuste en même temps. Les bases de support se glissent sur le guide, ils s'y fixent, et les vitres sont montés et serrés.

Dimensions de vitre préconisé à 88.4, à 17.52mm & 21.52mm d'épaisseur.

Advantages

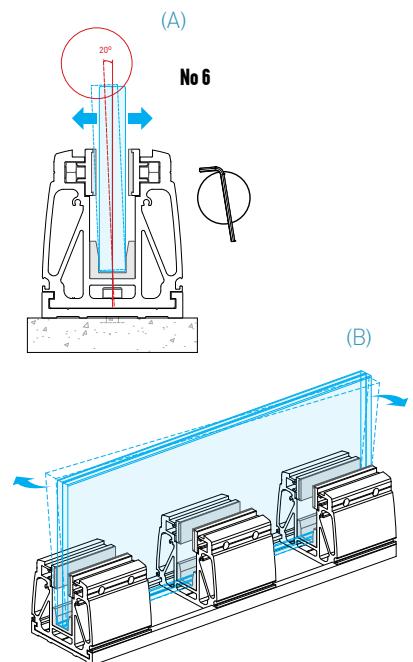

- unlimited view
- maximum security
- easy alignment
- additional floor guide
- additional pressure plates
- wide range of color choices (RAL, Sable, metallic, anodized & wood finish)
- optional use of top handrail

Characteristics

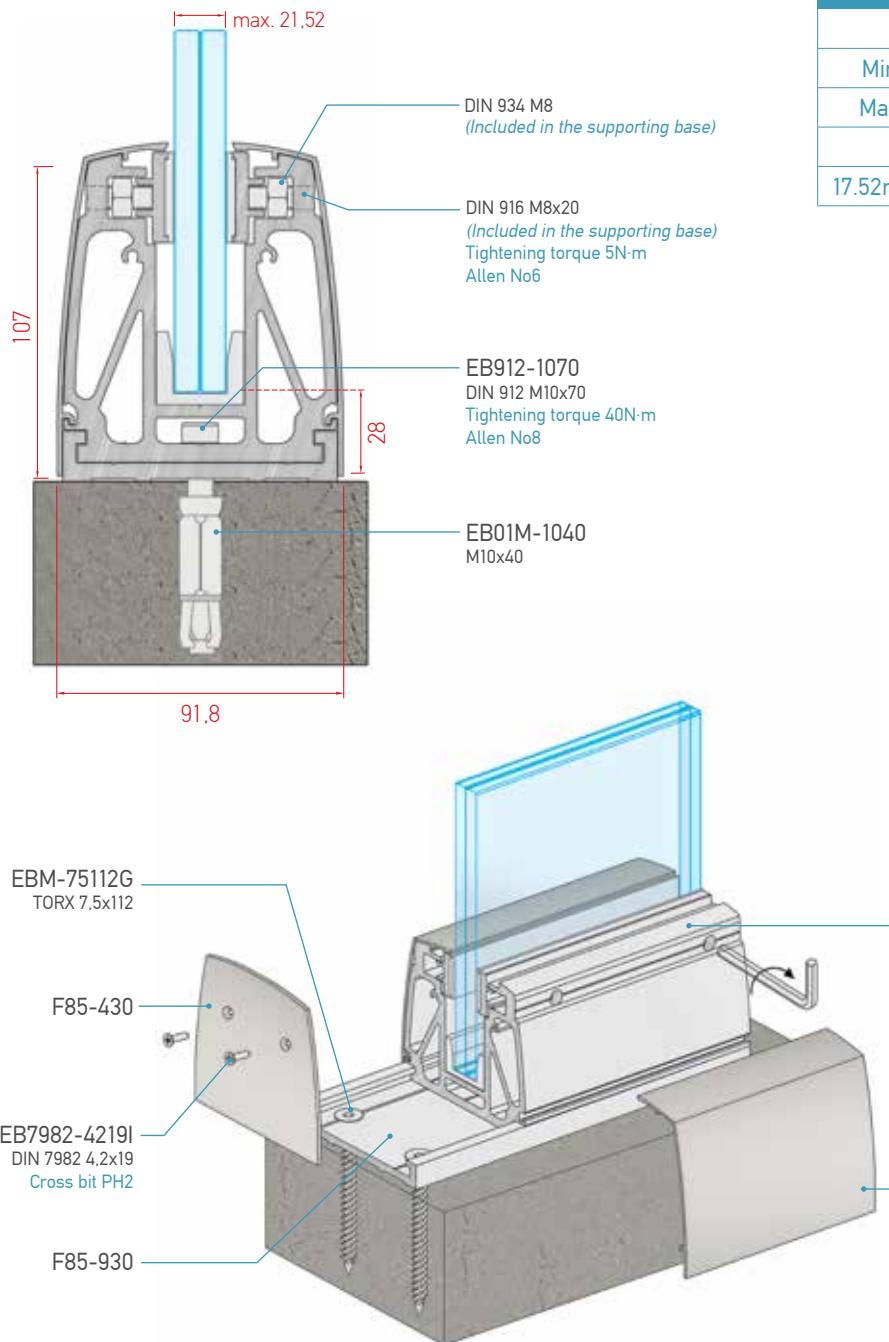

- Transparence illimité
- Sécurité maximal
- Montage et alignement rapide et soigneux
- Guidage de sol
- Calles de pression
- Choix de coloris (RAL, Sable, anodize & teint de bois)
- Option de main courante

Type C2

On-Floor System

Pose sur dalle

On-Floor System

Frameless glass offers a seamless and stylish appearance which is unmatched by any other product. For a sleek and unobtrusive look, Type C2 is the undisputable solution. The square line supporting bases are fixed on the ground profile and coved by fascia profiles, easy to remove in case of glass replacement. Glass panels specified for this system are: 88.4, 1010.4, thickness of 17.52 & 21.52mm. maximum height at 1200mm.

Pose sur dalle

Conçue pour répondre aux critères de sécurité les plus strictes, en usage résidentiel ou commercial tel que halles, salles de loisir et centre commerciaux. Les verres sont d'une épaisseur déterminé selon l'emploi, allant de 88,4 à 1010,4, épaisseur du 17,52 & 21,52, et hauteur 1200mm.

Advantages

- Seamless and stylish appearance
- Complies to the strictest safety measures (test results available)
- Practical alignment from internal side of balcony
- Quick installation with a floor guide
- Possibility of embedding the system
- Optional use of handrail.
- Wide range of colors – RAL, Sable, anodized & wood imitation

Characteristics

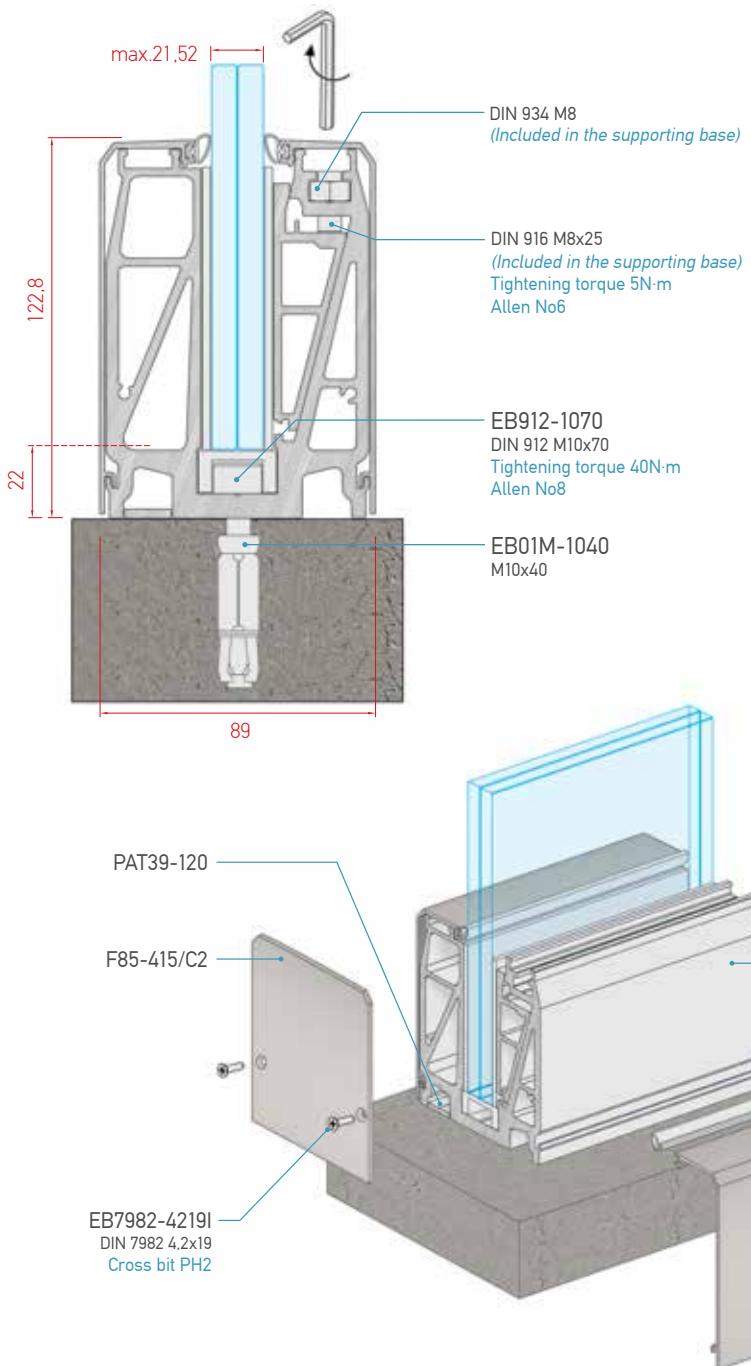

- Transparent
- Certifie par IFT Rosenheim
- Alignement ais  
- Option d' encastrement
- Option de main courante
- Choix de coloris - RAL, Sable, anodise brosse

Type D

Fascia mount system

Pose sur nez de dalle

Fascia mount system

Glass panels mounted on aluminium fascia supporting channel, suitable for balconies, terraces and staircases. Extremely elegant and unobtrusive due to the covering profiles and rosettes which support the whole structure Specified glass to be used is 88.4 & 1010.4, in thickness of 17.52 & 21.52 respectively. Maximum height at 1200mm.

Advantages

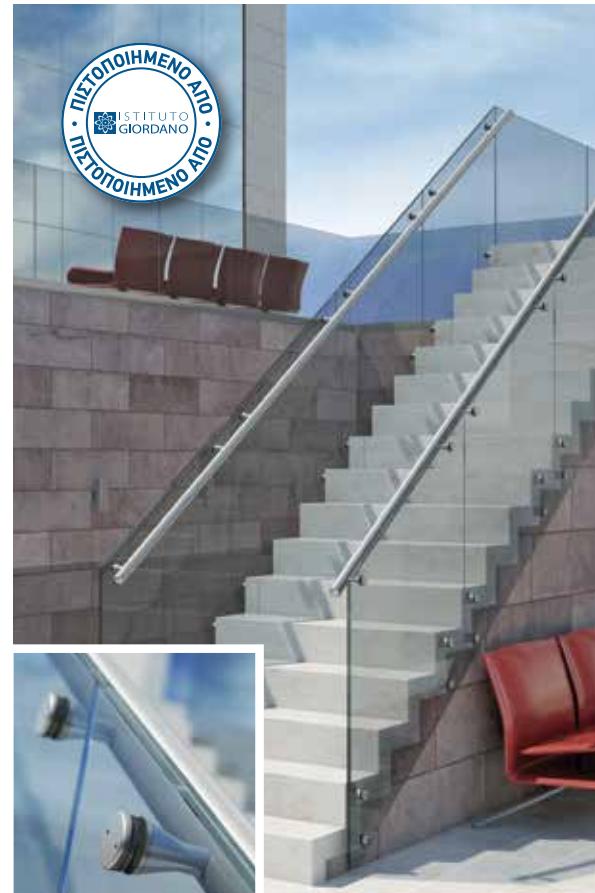

- Total frameless effect
- Suitable for internally or externally
- Mounted on external side of wall
- Optional use of handrail
- No drilling or damage of insulation

Pose sur nez de dalle

Plus facile que jamais, avec ce système de pose en appliquée (nez de dale). Le profil structurel se fixe sur le mur et le verre est monté avec des adaptateurs de verre. L'habillage de l'ensemble donne ce garde-corps son élégance et.

Caracteristics

- Effet tout verre
- Utilisable à l'intérieur et extérieur
- Ergonomie d'espace
- Option de main courant
- Protection d'isolation thermique

Type Ds

External support with glass brackets
 Pose sur nez de dalle avec des adaptateurs à verre

 Installing this system on your staircase or balcony, a floating and totally frameless effect is gained.

The glass brackets in stainless steel of 40 and 50 diameter, are fixed directly on the external wall. Additional brackets available for use of handrail.

 Pour avoir de transparence sans limites ! Ce garde corps tout verre, sans structure porteuse, s'inscrit dans une tendance architecturale forte. Les adaptateurs à verre rond à 40 & 50 en inox brosse, offrent la structure la robustesse et la beauté à la fois.

Advantages

- Perfect solution for staircases
- Stunning look
- Easy installation with 88.4 or 1010.4 securit glass

Characteristics

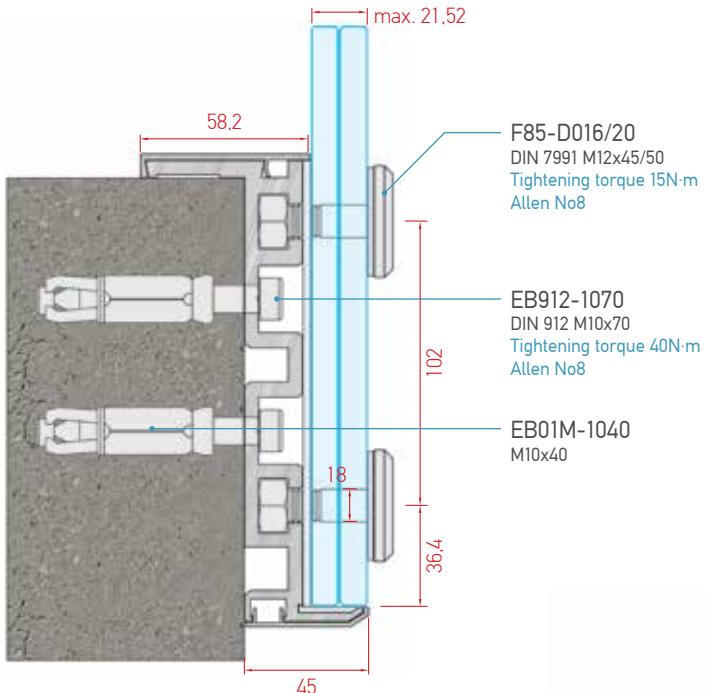

- Effet tout verre
- Esthétique luxueuse
- Facile à monter de verre à 88.4 ou 1010.4 securit

Type Dc

External support with fascia aluminium profile
Système en applique

External support with fascia aluminium profile

 In this version the supporting profiles are totally covered by aluminium profiles, giving a unique and seamless look. Can be mounted with 88.4 and 1010.4 glass in thickness of 17.52 & 21.52 respectively. Maximum height specified at 1200mm.

Système en applique

 Ce type de Crystalline offre une solution pratique et esthétique grâce à la pose sur nez de dalle et son habillage avec les profils en aluminium. Le verre spécifique est de 88.4 & 1010.4 et épaisseur de 17.52 & 21.52 respectivement. Hauteur maximale à 1200mm.

Advantages

- Floating effect
- Possibility of mounting the glass without any drilling
- External fascia mounting
- No damage to installation
- Choice of finishes: RAL, Sable & anodised

Caracteristics

- Effet tout verre
- Pas de perçage
- Habillage par aise
- Choix de coloris

Type **Dc** No Drill

Evolutionary concept of external fascia mounting, without any drilling on the glass panels

Conception révolutionnaire sans percer le verre!

The newest entry in the frameless glass systems, allowing the mounting of the glass on aluminium profile guide and brackets. maximum height of glass must not exceed 100cm

Ce type de garde corps extérieur très design, se caractérise par le verre transparent, épais, maintenu par des fixations en aluminium profilé.
La main courante en aluminium anodisé brossé, ici optionnelle vient couronner l'ensemble de cette réalisation.

Advantages

- Minimal and seamless design
- Limitless view
- Easy installation
- No drilling required

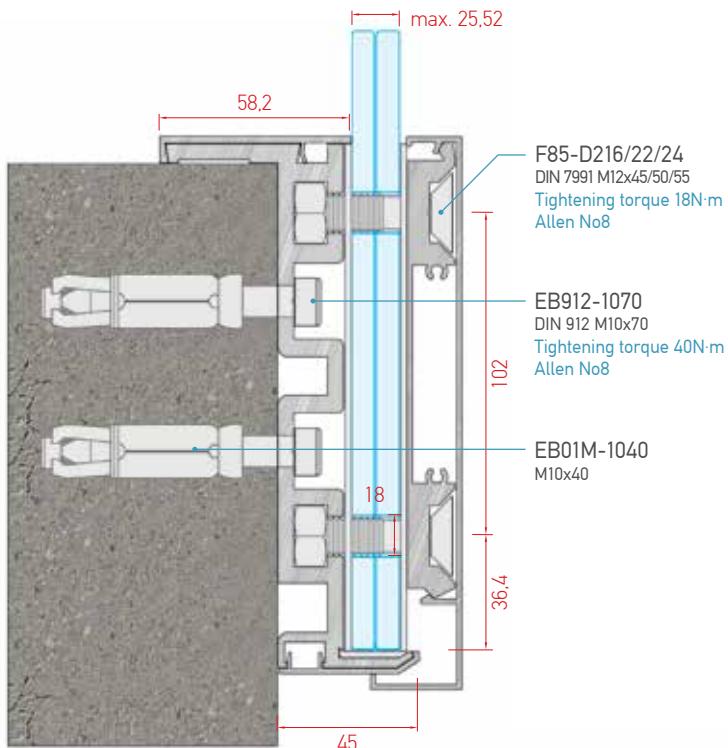

Characteristics

- Pas de perçage
- Vision totale
- Compatible avec Dc
- Pas de perçage

Type E

Heavy duty on floor system

Système de haute exigence

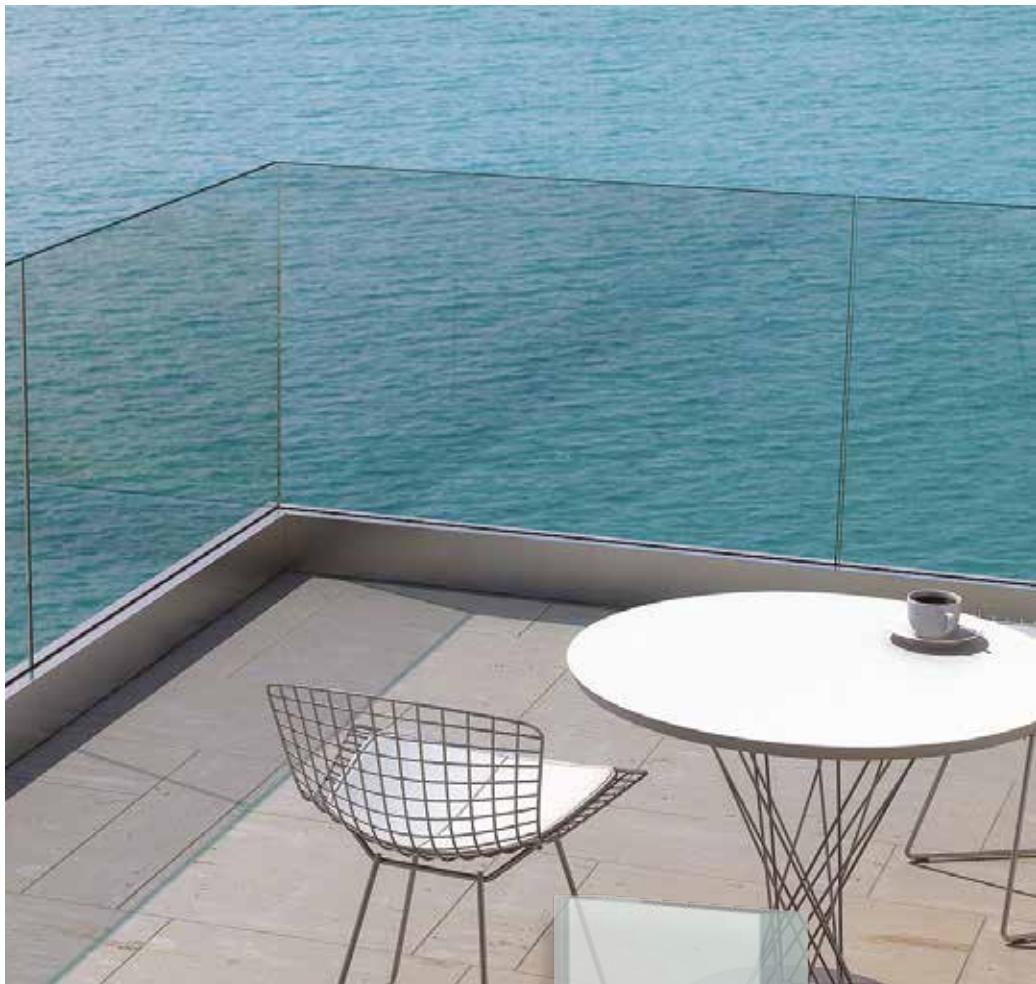

Heavy duty on floor system

Glass balustrades are unmatched for their ability to bring safety, visual appeal and practicality to high traffic external spaces. The excellent engineering design of this system with the certified mechanical properties make it a signature product. Safety is no longer a question or concern, for any type of construction even with the strictest specifications. Specified glass panels in 88.4, 1010.4 and 1212.4 with thickness of 17.52, 21.52 and 25.52, are to be used with this system.

Système de haute exigence

Quand la sécurité rencontre la transparence, c'est grâce au système Type E qui les en offrent. La combinaison de profiles de sol avec les bases de support très robuste, et l'usage de vitre à 88.4, 1010.4, 1212.4 à l'épaisseur de 17.52, 21.52 et 24.52 mm, les demandes les plus exigeants sont satisfait. Le système Type E a fait l'objet de tests de résistance mécanique, garantie d'une utilisation sans risque dans les conditions les plus sévères. Le verre est fixe par serrage, aucun perçage est requis. Le système peut être utilisé dans des espaces public et de grand trafic: hôpitaux, centres commerciaux, aéroports, salles de spectacles et stade de sports.

Advantages

- Excellent mechanical properties
- Certified with glass panels at 1200mm without handrail
- wide range of glass thicknesses
- assembly and alignment from internal side of balcony
- safety guarantied
- suitable for public and heavy traffic areas: hospitals, office buildings, sports stadiums and shopping centers

Characteristics

Système livré prêt à l'emploi.

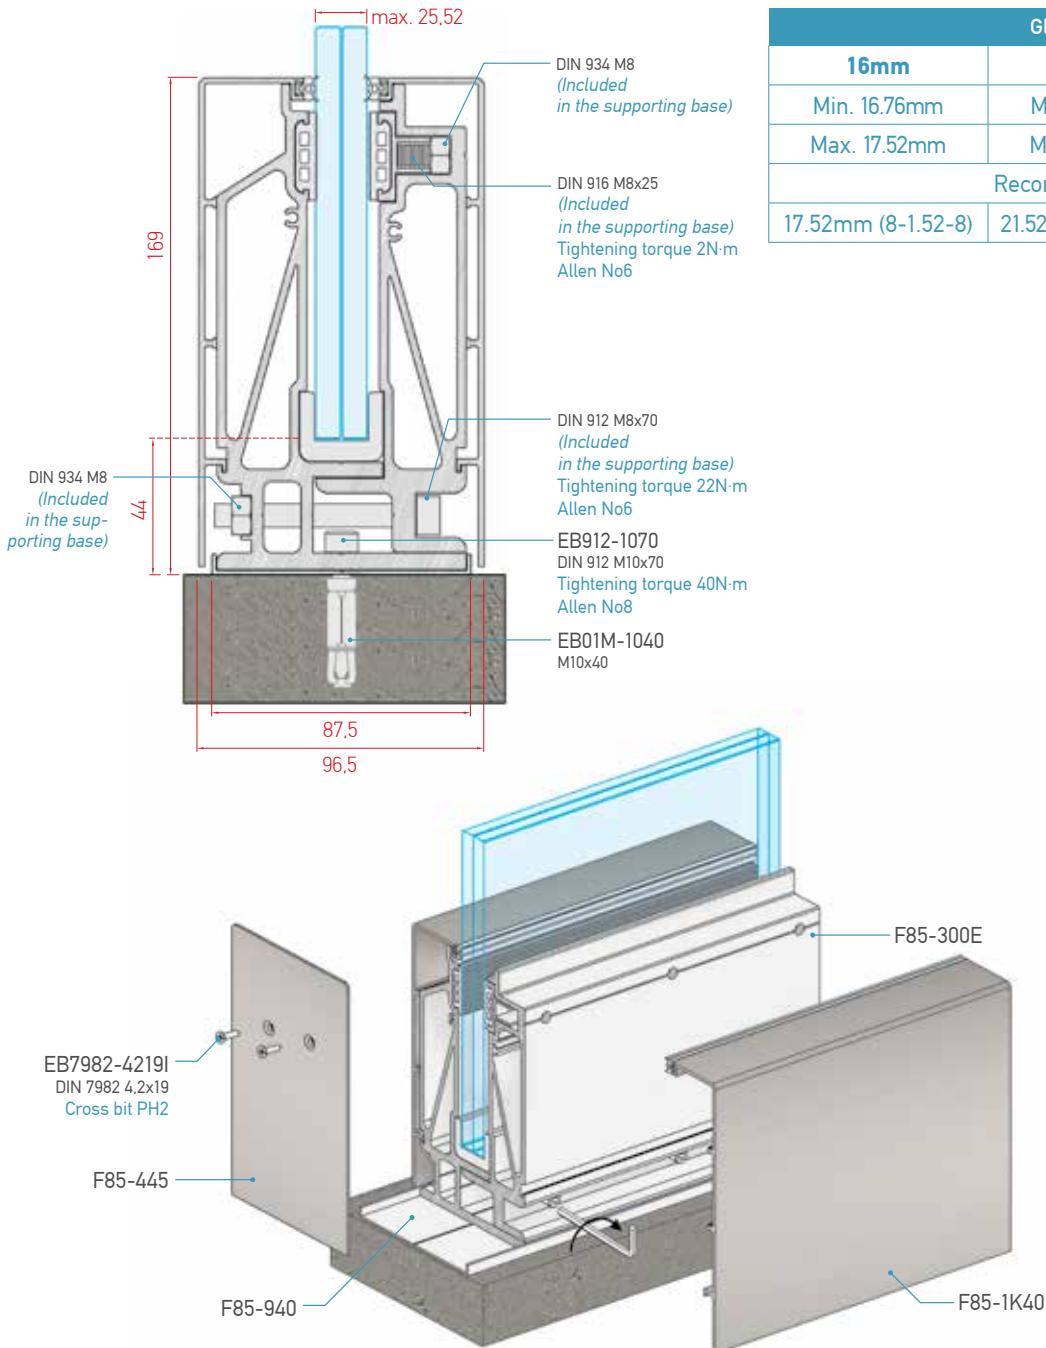

- Robustesse
- Longévité
- Certifie sans main courante.
- Flexibilité a l'adaption de verre
- Choix de coloris : RAL, Sable, anodise brosse
- Sécurité maximale

Top handrails & brackets

Main courantes et fixations

Top handrails & brackets

All Crystal Line systems can be optionally mounted with a top handrail. Available in three different sizes and shapes (Pic. 1 & 3), two round one of 50mm diameter and an oval in 76mm width (Pic. 2). The handrails are designed to be mounted and secured on the glass panel using rubber gaskets.

In cases where the handrail is desired or specified to be side mounted on the glass panel, special brackets are applied on the drilled glass panel.

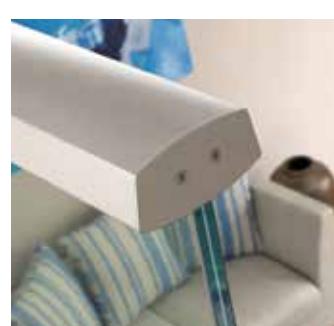

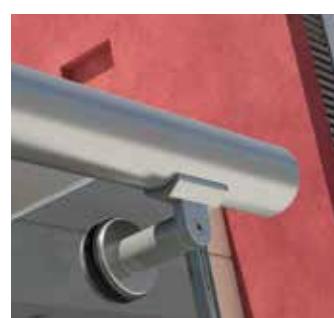

Available in all RAL shades, wood imitation and brushed anodized same as all Crystal Line profiles.

Main courantes et fixations

Toute la gamme de systèmes Crystal Line peut adapter des main courantes.

ALUMINCO propose trois types de main courantes, deux en rond (Ph.1) de diamètre 50mm et une ovale à 73cm de largeur (Ph. 2). Elles sont montées à l'aide de joints et fixées au dessous ou bien sur verre avec des supports.

Disponibles en tout teint de RAL, sable et anodisé brosse, comme l'ensemble de profiles Crystaline.
